IBM Certified AIX V4.3 System Administration

Why you applied for the PM Training:

I have been a project manager on National Environmental Policy Act (NEPA) and IT projects, and I felt that trying to use a more formalized process would help lead to a better potential for project success. The diversity of skills learned can be applied in many aspects of my career beyond just project management.

How would you rate the quality and content of the training you received:

The quality and content of the ESI training track was great. While the amount of material presented was abundant, it also opens one's eyes to the fact that a project manager must continue to increase their knowledge and enhance their skills.

How do you anticipate using your new skills:

I anticipate combining the project management skills that I have learned with my passion and experience in the fire management program and my depth of knowledge and experience in the IT world. I see this as an opportunity to combine three career paths into one.
